FONEPAY BUSINESS APP

Overview

Fonepay Business app is a very useful app for those business who want to do payment activities through digital platform.

Current System Analysis

User first enter the app through sign in, signup or using social media and land into the home page. User can do various activities on home page after getting user id. They can check their total balance amount, link to bank, transfer amount to others bank. Payment can be done via this app by using fonepay scan and user can see their total balance, balance history, withdraw log. Refunding facilities is also available on this app available on this app through which user can fully or partially refund their amount.

Problem & Solution

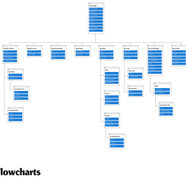
Currently we have fonepay business app on play store too but due to the less user friendly we are shifting towards this new app. Most of the features which we described above are already fulfilled by our current app. But ou main goal is to add some extra features in this app which is very crucial to the users for their business. Like profile making, fonepay scan through different way, refunding, create new offer etc.

New System Elaboration

The new business app is more user friendly and can meet the future need of users. There are some added features through which businesses can conveniently accept payments and keep track of their business transactions.

Site Map

After a detailed research of functionality & requirements, this is the final sitemap of fonepay Business App. This sitemap is mapped hierarchically according to the user's step-by-step tapping process.



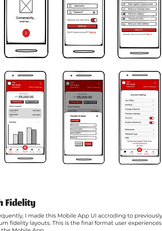
Flowcharts

Low Fidelity

Accroding to the sitemap, I made these mobile app layout's blueprints. Then this layout helped me smoothly work on the medium fedility layouts.

Mid Fidelity

Following the low fidelity layout , this is the work in progress layout as I strated working. The layout includes working on the visual aspects and segregation of application.



High Fidelity

Subsequently, I made this Mobile App UI accroding to previously made medium fidelity layouts. This is the final format user experiences while using the Mobile App.
